

8. Quelle est la charge?

- A) Des métaux alcalins ? 1⁺ D) Des halogènes ? 1⁻
 B) Des alcalino-terreux ? 2⁺ E) Du radical OH ? 1⁻
 C) De l'oxygène ? 2⁻ F) Du radical NH₄ ? 1⁺

9. Écris l'équation de dissociation des composés du numéro 7 et justifie les charges de tes ions par le balancement des charges:

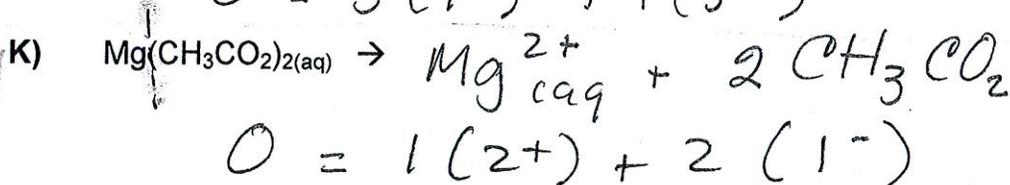

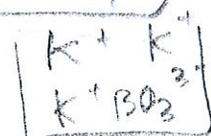

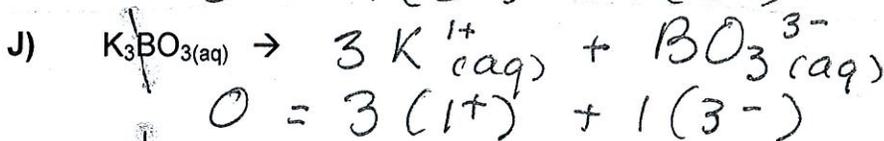

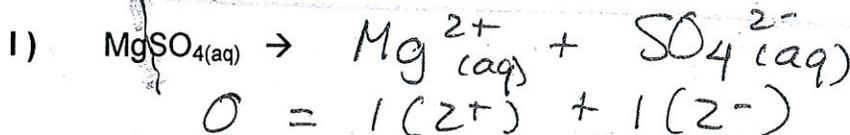

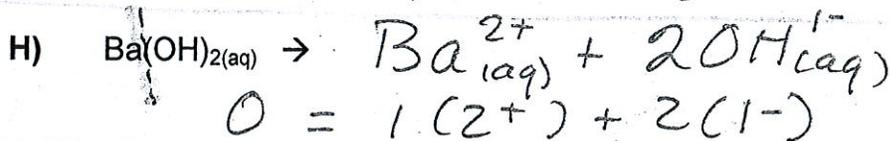

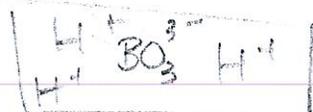

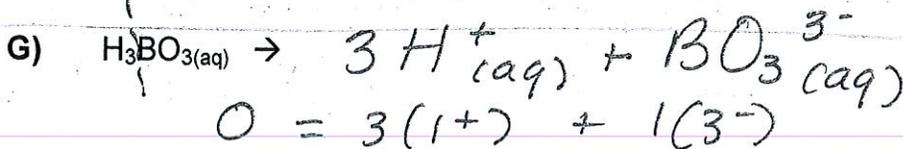

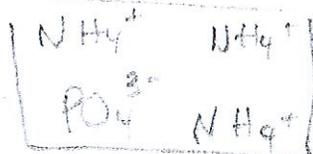

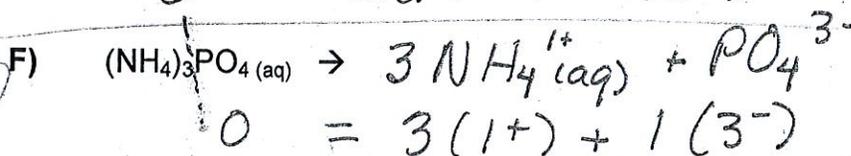

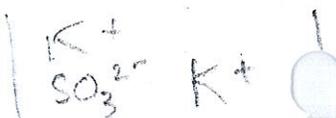

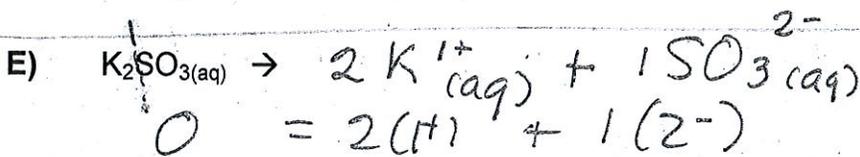

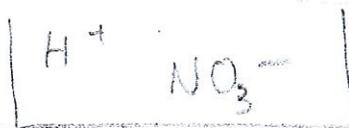

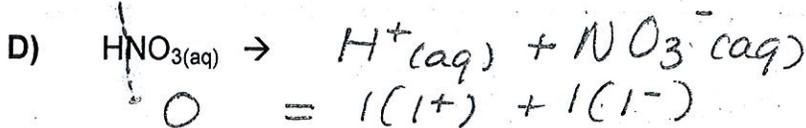

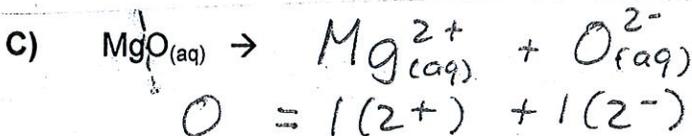

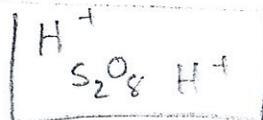

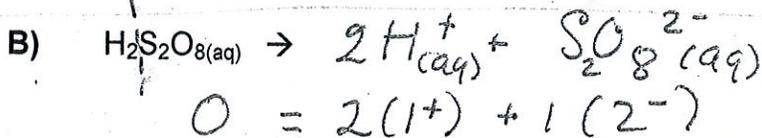

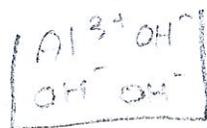

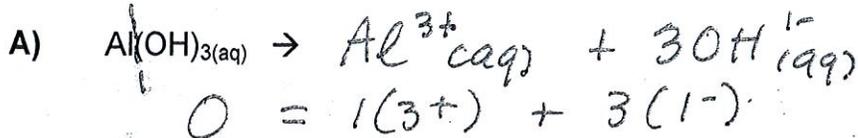

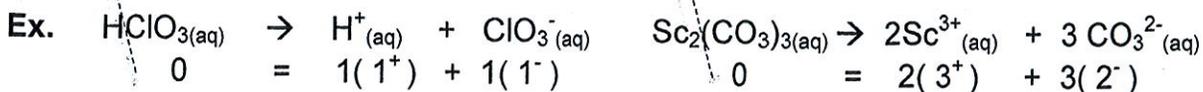

B) _____

10. En te basant sur les formules moléculaires, classe les substances suivantes selon qu'elles sont des **électrolytes(E)** ou des **non électrolytes(NE)**.

- | | | | |
|----------------------------------|-----------|-----------------------------------|-----------|
| A) HNO ₃ | <u>E</u> | F) PCl ₃ | <u>NE</u> |
| B) C ₃ H ₈ | <u>NE</u> | G) CO ₂ | <u>NE</u> |
| C) NaCl | <u>E</u> | H) KNO ₃ | <u>E</u> |
| D) HBr | <u>E</u> | I) LiOH | <u>E</u> |
| E) NH ₄ OH | <u>E</u> | J) H ₃ PO ₄ | <u>E</u> |

11. Écris les équations de dissociation et justifie par le balancement des charges:
Indique par une ligne hachurée, l'endroit où la molécule se sépare.

* On "coupe" toujours après le metal ou le H ou le NH₄ (ou avant OH pour une base)
